

Dr. Beat Richner, Kantha Bopha Children's Hospitals, 8.4.2013

A child suffering from severe bird flu (H5N1) was saved in Kantha Bopha

From January 1st to March 31st 2013 the Kantha Bopha Hospitals had to admit for **hospitalization 26 337 severely sick children** (2012: 26 115). Among these patients 7 children were suffering from most severe bird flu (H5N1). As soon the diagnosis of the deadly disease bird flu (or chicken flu) has been confirmed by the Institute Pasteur the Ministry of Health of Cambodia was informed.

The 7th child suffering from severe bird flu could be saved. The following pictures are showing the evolution of the disease in the Kantha Bopha Hospital. First the child was in coma and it was suffering from severe pneumonia. The X Ray of the lungs is showing an improvement. On day 8 the child is no more needing oxygen and can start to eat little by little.
