

# Facts And Figures 2013

In 2013 the Kantha Bopha Hospitals were again saving thousands and thousands of children's lives and were preventing hundreds and hundreds of children from being handicapped.

**687 083 sick children** were treated in the outpatient station.

**119 945 severely sick children** had to be admitted for hospitalization.

**16 749 surgical operations** were done.

**110 616 pregnant women were controlled** in the outpatient station at our maternity in Siem Reap Angkor.

**17 747 deliveries** occurred at our maternity in Siem Reap Angkor.

In the meantime our Cambodian staff is doing by themselves every day one heart operation and one invasive heart catheter. So in 2014 at least **600 children suffering form a heart malformation will be cured.**

Our Cambodian staff now can do neurosurgical operations by themselves too, that means the delicate extirpations of so many brain tumors. (**In 2013: 464 neurosurgical operations**)

**2013 we had to hospitalize 11 505 severe cases of the Hemorrhagic Dengue Fever (HDF).** (2012 there were 29 000 severe cases of HDF to be hospitalized.)

**11 505 severe cases of HDF in 2013 : It is still too much!** We hope that 2014 all the families from all over the country are getting Abate, in order to treat the clean water around the houses. In 2013 only 30% of the families have got the Abate.

**In 2013 440 small infants have to be hospitalized suffering from cerebral hemorrhagic.** This severe disease could be prevented, if everywhere, in the public health sector and in the private health sector, the Vitamin K would be given to the newborns! Let us hope it will be given everywhere in 2014 . Infants born at term in our maternity with 17 747 deliveries per year are never suffering from cerebral hemorrhagic.

**Dr. Beat Richner, founder and head of the Kantha Bopha Hospitals, 4.1.2014**
